

1. Before CPU and Memory

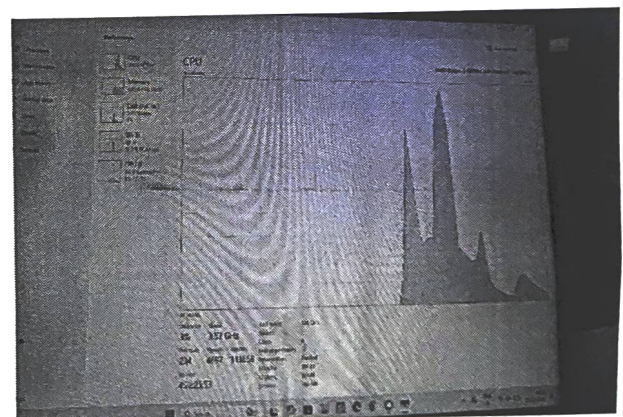

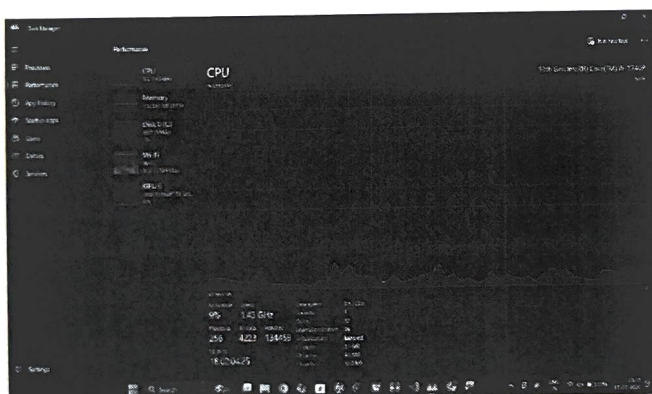

After CPU and Memory

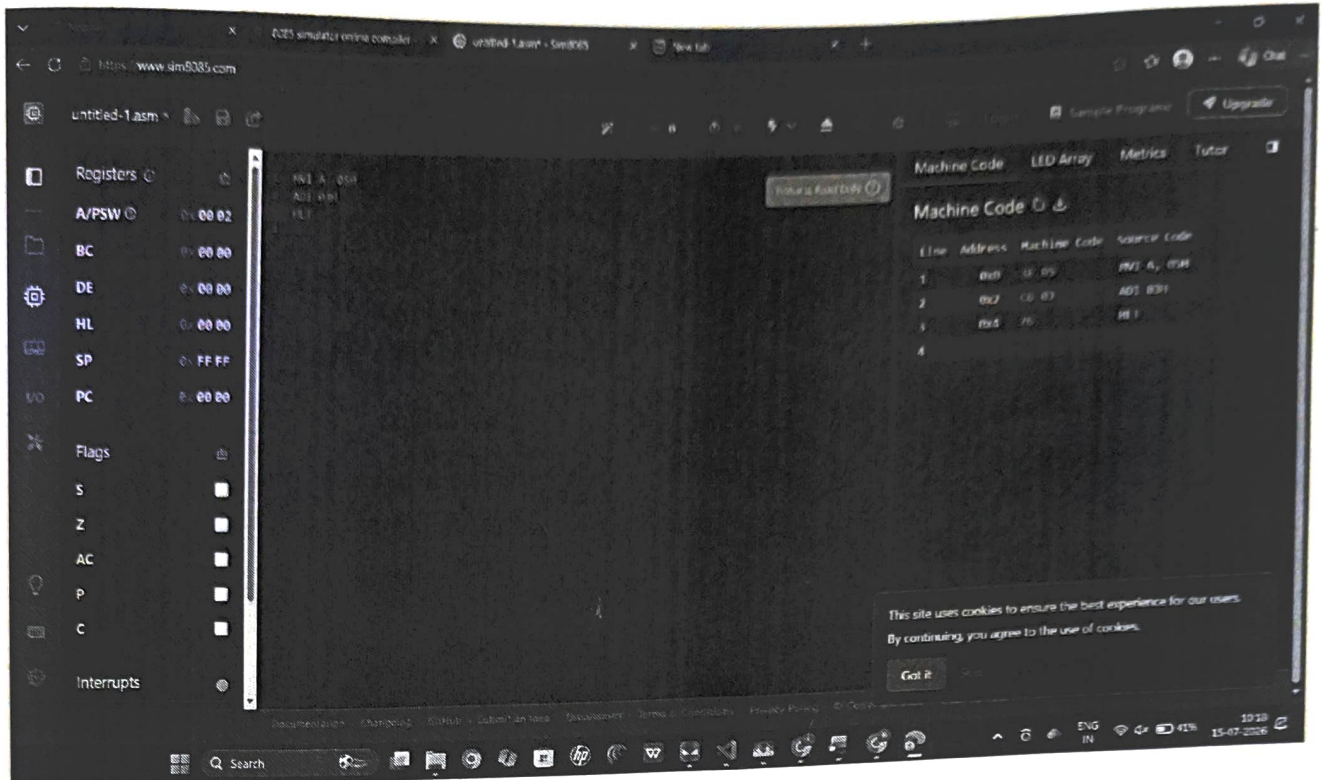

The computer become slower after opening multiple application.

2. Computer-1

For overall program execution and multitasking, Computer 1 (Intel 13th Gen) is expected to perform better because it has 12 cores and 16 logical processors, allowing it to execute more tasks in parallel.

3.

The 8085 assembly program

MVI A, 05H, ADI 03H, HLT

The generated machine code

3E 05, C6 03, 76

The memory address

observation:

Instruction	Machine code	Accumulator	program counter
MVI A, 05H	3E 05	05H	00 02H
ADI 03H	C6 03	08H	00 04H
HLT	76	0FH	00 05H
